

Amendments to the Specification

[0024] Figure 3B is a side view of the embodiment of the invention depicted in Figure 1A. As shown in Figure 3B, an enclosure ~~32~~42 may be placed on the channel 26 to form a chamber over the frame first portion 20 and the goods. In preferred embodiments, a seal 34 along the lower perimeter of the enclosure ~~32~~42 may facilitate forming the chamber by deforming against the frame 12, such as along intermediate portion 24. The seal 34 is preferably comprised of, for example, a gasket, plastic tubing, a laminated casing filled with compressible material (such as closed cell foam, polystyrene or the like), plastic foam, a composite closing structure, a flexible and/or solid base holding a liquid, a flexible material, such as hollow or solid hosing, synthetic foam, rubber, or rubber foam, a solvent dispersed synthetic rubber resin adhesive, or one or more sand “snakes” (that is, vinyl sleeves filled with sand) or loose sand, but is not limited thereto. Preferably, the seal 34 substantially seals the chamber.
